CHANGES TO CITY OF BROOMFIELD AND COLORADO DEPARTMENT OF
HEALTH ENVIRONMENTAL MONITORING PROGRAMS

For your information, attached is a copy of a November 4, 1987, letter from Kathy Kochevar, Chemist for the City of Broomfield, to Al Hazle, Director of the Colorado Department of Health Radiation Control Division. The letter describes changes to the monitoring programs for the Rocky Flats Plant agreed upon by these organizations.

Currently, upon notification by Rocky Flats of an impending holding pond discharge, the Colorado Department of Health samples the pond and analyzes the sample for gross alpha, gross beta, and tritium radioactivity. The results are reported to the Plant prior to the discharge. Also upon notification, the City of Broomfield activates an automatic sampling device at their Walnut Creek at Indiana sampling station to provide a composite sample collected throughout the discharge. This sample is analyzed for gross alpha, and gross beta radioactivity.

Under the change described in Kathy's letter, the City of Broomfield would provide some of their composited sample, taken during the discharge, to CDH for specific plutonium analysis. Although not mentioned in Kathy's letter, CDH also may analyze the sample for specific uranium and tritium.

To date, no request has been received by HS&E for any reimbursement for CDH's expenses in this analysis, nor have we been given reason to believe that such a request will be made.
